

Code and Chill

presents:

Search Project

A recipe search program that uses the Edamam API to fetch recipes based on the user's search criteria.

MoSCow

MUST:

- the users can search by ingredient/s to find recipes
- display the recipes for each search criteria

SHOULD:

- the user should be able to filter by cuisine type
- the user should be able to navigate to see more results
- the user should be able to save the search result to a txt doc

MoSCow

COULD:

- the user could exclude certain ingredient/s
- the search program could have more search filters
- the user could save the ingredients of a selected recipe to a txt doc

WON'T:

- place online orders for ingredient/s
- 
- 

THANK YOU!
